ADSL2+ Wireless N300 Modem Router With Gigabit WAN, VoIP and USB host

THE NB16WV INCORPORATES NUMEROUS TECHNOLOGIES INTO ONE STYLISH DEVICE THAT CAN ACT AS THE CENTRAL CONNECTION POINT FOR ALL OF YOUR ONLINE ACTIVITIES WITHIN YOUR HOME OR OFFICE.

By featuring both an ADSL2+ modem and a Gigabit WAN port you can choose whether you connect to the Internet via ADSL or a fibre service. If you don't have a fibre connection, the Gigabit WAN port will have you protected should you choose to update in the future.

This router also includes 2 x USB host ports that can be used to connect USB devices so that their capabilities can be shared will all connected users. Connect a compatible 3G USB modern that can act as an additional connection option when a fixed line connection is not available, like at a holiday home. Connect a USB hard drive so that all files stored can be accessed and shared.

The included FXS port can be used to connect a standard telephone that will allow users to make calls over the Internet. By using a VoIP service, phone bills can be dramatically reduced and if connecting with Fibre, the phone line can be made redundant.

All of these features can be shared with multiple users via the built-in wireless access point or the four LAN Ethernet ports. The high speed Wireless N provides a signal strong enough to penetrate the far corners of a house and can connect all WiFi enabled devices, such as laptops, smart phones, gaming consoles, tablets and PCs. The four LAN Ethernet ports provide a wired connection that can be used to connect desktop computers, media devices or any Ethernet equipped product.
