

# Seagate® Replica™

## Complete PC Backup System

### Perfect for when you need to:

- Back up your entire PC including the operating system, programs and settings

\* Dock included with Multi-PC version only

### Interface USB 2.0

### Capacities Multi-PC (500 GB), Single PC (250 GB)

As digital cameras, camcorders and MP3 players increase in popularity, our memories and assets become predominantly digital. Photos, videos, music and documents have become more than just files — they make up our digital lives. Protecting digital assets and memories is important, but for many, this practice requires a time-consuming regimen of burning CDs/DVDs or manually dragging-and-dropping individual files to flash drives.

Now you can forget about the stacks of discs and the drawers full of flash drives. The Replica complete PC backup system effortlessly and continuously stores up-to-date copies of everything on your PC, including the operating system, programs and settings — without you doing any of the work. Backing up does not get any easier; simply connect a single USB cable, click OK and you are backed up — no tedious installation, nothing to configure<sup>1</sup>.

Since the Replica backup system backs up everything on your PC, you never have to worry about not being able to recover your data after a computer crash or virus<sup>2</sup>. Normally, if your PC has a software problem or hardware failure, it could take several hours to reinstall your operating system and programs, reconfigure your settings and bookmarks, and restore your photos, videos and music from a backup copy (if you have one). With the Replica backup system, you can simply restore your entire PC to a previous point in time, without having to spend countless hours manually installing and copying files. Since the Replica backup system automatically and continuously backs up copies of everything on your PC, you can simply revert your system to a point in time when your PC was functioning properly — it is really that easy!

If you accidentally delete a file, you can easily retrieve a previously saved version. The Replica backup system stores up-to-date copies of all of your files, including open files, in the same structure as your PC. Simply navigate to the backed up copy, then drag-and-drop to restore files.

A Multi-PC version of the Replica backup system is available for homes with two or more PCs. The Multi-PC version has twice the storage space for backed up copies of all the digital assets in your home. Plus, the Multi-PC version includes a convenient dock to hold the Replica backup system vertically, which saves valuable desk space.

### Highlights

- Effortless, automatic backup for everything on your PC, including the operating system, programs and settings
- Simply plug in a single USB cable, click OK, and you are backed up — no tedious installation, nothing to configure
- Drag-and-drop from your backup copy to retrieve accidentally deleted files effortlessly
- Recover from a PC crash simply by restoring your entire system
- Password protection ensures that only you have access to your computer's backed up files
- Removes the oldest backed up versions of files automatically to free up space for newer versions
- Multi-PC version includes a convenient, vertical standing dock

<sup>1</sup> Depending on a user's operating system settings and hardware configuration, some backup options may require user input before backing up files.

<sup>2</sup> This device is designed for backing up and restoring files with the included software only.

# Seagate® Replica™

Complete PC Backup System

## Product Dimensions

### Replica
